PROFESSIONAL SUMMARY

Junior Software Developer and Lyon College graduate with dual degrees in Computer Science and Data Science. Experienced in software development, Python, R, SQL, machine learning, predictive modeling, OCR/data extraction, and practical AI engineering workflows. Brings a strong troubleshooting background from years as an appliance repair technician, with a focus on turning ambiguous problems into reliable systems.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL/T-SQL, C#, Java, HTML/CSS

Web: React, Astro, Tailwind CSS, REST API integration

Testing & delivery: Vitest, Playwright, Docker, CI pipelines, Git/GitHub, database migrations, SQLite/PostgreSQL

Data / ML: pandas, NumPy, scikit-learn, XGBoost, regression, model evaluation

AI / Automation: LLM API integration, OCR pipelines, structured extraction, validation workflows, Azure Document Intelligence

PROFESSIONAL EXPERIENCE

Junior Software Developer — Lifeplus

June 2025 – Present

- Built production frontend features in React and TypeScript, integrating internal APIs, as part of a six-person software team.
- Audited a data-integrity defect across production history: recomputed the correct value for every affected record and reported disagreements before writing anything, repairing only what the fix was responsible for.
- Built a regression suite spanning unit, integration, API and browser levels, with a standing practice of proving each new test fails for the right reason before it is trusted.
- Diagnose defects to root cause and communicate findings to both technical and non-technical stakeholders.

Appliance Repair Technician — Alpine Appliance, Batesville, AR

August 2017 – 2024

- Diagnosed and repaired a wide range of appliance issues across brands, models, and equipment ages.
- Communicated repair options and technical findings to customers clearly.
- Managed daily schedules, parts, component inventories, and field-service priorities.

PROJECTS

ProphetCMA — Real Estate Price Prediction

R, GBM, XGBoost, kNN, Random Forest

- Built an R-based ensemble modeling pipeline to automate Comparative Market Analysis for residential real estate.
- Compared Linear Regression, kNN, Random Forest, GBM, and XGBoost using MAE/RMSE.
- Achieved best result with a 15% XGBoost / 85% GBM blend: MAE 6,776 and RMSE 11,166.

Signature Data Extraction

Python, Azure Document Intelligence, OCR

- Built a Python + Azure Document Intelligence OCR pipeline to convert scanned signature sheets into structured CSV output.
- Used validation logic and confidence review to separate reliable printed fields from low-confidence handwritten signatures.

Portfolio Site

Astro, Tailwind CSS, Playwright

- Built this portfolio site with Astro and Tailwind CSS: SEO metadata, shared navigation, a CSS-drift and broken-link guard on every build, and a zero-diff Playwright visual regression suite.

Unity Game Lab

Unity URP, C#

- Building a Unity URP world demo with procedural terrain, biome data assets, editor tooling, and C# placement systems.

EDUCATION

Lyon College — Batesville, AR

Graduated May 2025

- Bachelor of Arts in Computer Science
- Bachelor of Science in Data Science
- GPA: 3.8 / 4.0 · Dean's List 2022–2024
